SETA

BREEZE AIR

It is entirely composed of the material of the same name, for a thickness of about 5 cm. Its density (D.52) and exceptional breathability make it the ideal product for those looking for a more anatomical mattress, but above all fresh and dry.

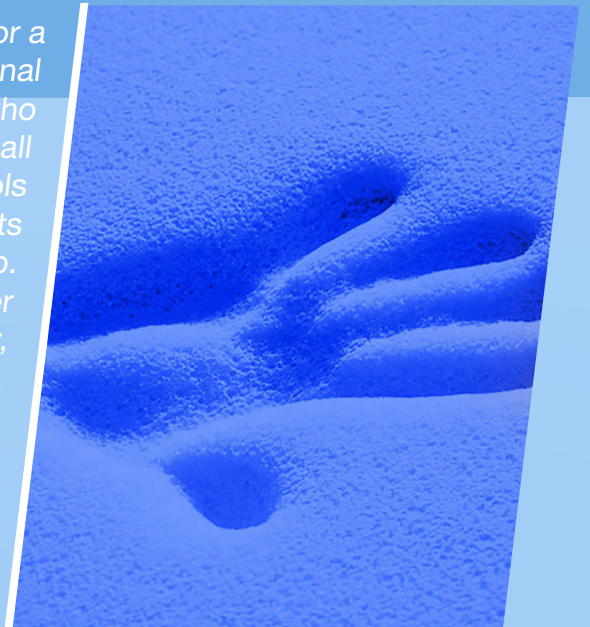

With its exceptional air permeability it cools very quickly, thus avoiding unpleasant night sweats that can disturb sleep.

BREEZE MF

It is entirely made of the material of the same name, for a thickness of about 5 cm. Its density (D.52) and exceptional breathability make it the ideal product for those who are looking for a more anatomical mattress, but above all fresh and dry. With its exceptional air permeability it cools very quickly, thus avoiding unpleasant night sweats that can disturb sleep.

Compared to its Air counterpart, it is in Memory so it is softer and more enveloping. It cools very quickly, thus avoiding unpleasant night sweats that can disturb sleep.

MIND

It is a topper entirely made of Memory Foam, for a thickness of about 5 cm. Its softness makes it the ideal product for those who want to reduce the rigidity of the existing mattress. The pleasant cloud effect eliminates joint compressions, eliminating pain and unpleasant tingling. It is also suitable for heavy people, as it makes rest more welcoming, without having to "lighten" the structure of the mattress.
